

Space-Time Insight Applies Data Analytics To Keep Workers Safe

Safety Intelligence Analytics Application Prevents Accidents and Speeds Response

San Mateo, Calif., April 15, 2016 – [Space-Time Insight](#), the leading provider of situational intelligence solutions, today announced the availability of the latest version of its Safety Intelligence solution. Safety Intelligence uses advance analytics to help asset-intensive organizations avert, respond to, and take action on safety incidents.

According to the U.S. Bureau of Labor Statistics, industries on average experience 3.2 non-fatal occupational injuries per 100 full-time workers. Some industries experience nearly four times this rate. Similar statistics exist for workplace illnesses and, unfortunately, fatalities.

Safety Intelligence is a software application that uses advanced analytics to help companies:

- Pinpoint the who, what, where, when, why and how of accidents that have happened or might happen
- Easily generate and act on daily accident predictions and recommended remedies
- Collaborate with and educate employees, contractors, vendors and other stakeholders on safety-related challenges
- Measure and optimize the effectiveness of accident prevention and safety education programs

"Safety demands predictive analytics, because you can't prevent what you can't predict," said Rob Schilling, CEO of Space-Time Insight. "As a result, the advanced analytics of our Safety Intelligence solution gives safety professionals the context and insight necessary to keep workers safe."

Safety Intelligence integrates with a wide range of IT, operational and external data sources that relate to safety. The application is commonly implemented in a matter of months for rapid impact on saving lives, preventing injuries, optimizing safety program costs and simplifying reporting.

About Space-Time Insight

Space-Time Insight liberates companies in asset-intensive industries from a fragmented view of the big picture, providing the context and clarity they need to make fast, confident decisions. Using spatial, temporal and nodal analysis, our IoT-ready real-time visual analytics applications illuminate the what, where, when, why and how of every asset and situation. Space-Time Insight's award-winning situational intelligence software powers mission-critical systems for some of the largest companies around the world, including eight of the twenty largest US utilities. We partner with leaders in the industry including Accenture, Esri, IBM, NEC, OSIsoft, SAP, Siemens and Unicorn Systems. Space-Time Insight is privately held and based in San Mateo, CA.
